

ENERGYONE

INTEGRATED BUSINESS SOLUTIONS

Energy One offers robust, pragmatic solutions for energy industry needs.

Energy One Limited is an ASX publicly listed company which provides software and services specifically to the energy industry. With over 10 years practical experience in the Australian energy market, Energy One has the industry knowledge and products to meet your needs in a timely manner, drive real savings, facilitate growth and add value to your business.

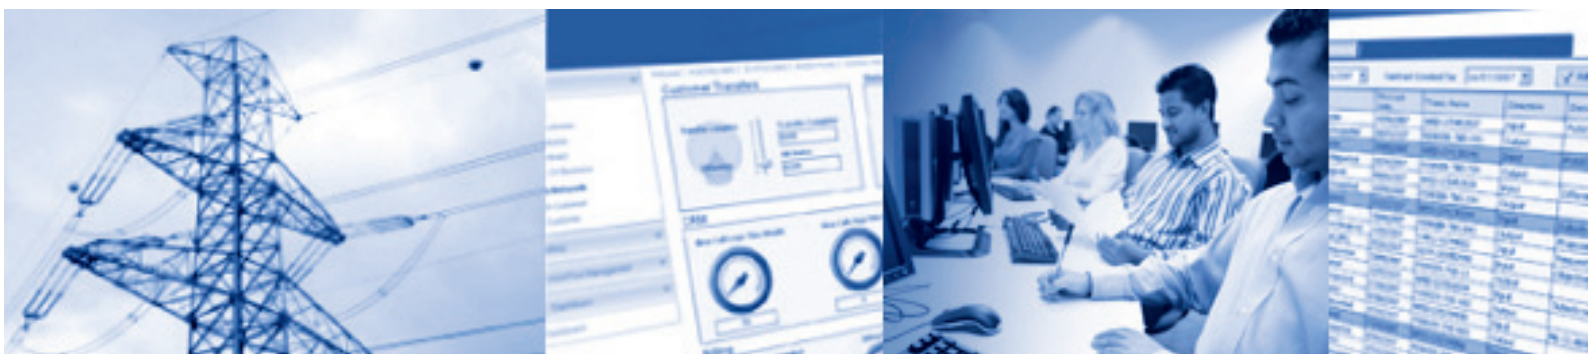

Energy One offers a suite of integrated software solutions covering Energy Operations and Retailing, Energy Trading and Smart Metering.

Energy One Retailing is an integrated and scalable enterprise solution for local electricity markets. Automated validation reduces errors and provides early, accurate reporting, saving you money from Sales to Profit.

Energy One Trading is a comprehensive, fully integrated and modular energy trading and risk management platform, proven and tailored for the Australasian market but with the flexibility to facilitate a client's individual needs.

Energy One MDMS (Meter Data Management System) is in-house developed software which acts as an interface between AMI meter data formats and billing systems which were designed to import accumulated energy data.

- **Energy Operations**
- **IT Consulting**
- **Energy Trading**
- **Managed Services**

Energy One Retailing is an integrated enterprise solution for local electricity markets. Energy One's **centralised architecture** enables the sharing and updating of information in each step in the value chain. Automated validation reduces errors and provides early, accurate reporting, **saving you money from Sales to Profit.**

- Fully integrated and scalable
- Manages data between Transfers, CRM, Metering, Billing & Settlement Systems
- Configured for client's individual needs and environment

Energy One Trading is a comprehensive, fully integrated and modular energy trading and risk management platform, proven and tailored for the Australasian market but with the flexibility to facilitate a client's individual needs. It features:

- An integrated system of physical energy and market interface, derivatives trading and risk management tools
- Built for energy markets by recognised energy market experts
- 4 years operation in the NEM
- Local Support

Energy One MDMS (Meter Data Management System) is in-house developed software which acts as an interface between AMI meter data formats and billing systems which were designed to import accumulated energy data.

Energy One MDMS provides billing system ready data as well as providing demographic and geographic analysis tools, which enhance risk management and the understanding of customer demand response.
