

Lost Data?

Labor-intensive processes?

Reporting not matching
your business KPIs?

Energy retailing relies on information systems. Unfortunately, information systems that control the data you need are often not integrated, overly complex, and designed to be jack-of-all-utilities.

Energy One's centralised architecture enables the sharing and updating of information in each step in the retail value chain. Automated validation reduces errors and provides early, accurate reporting, **saving you money from Sales to Profit.**

Transfers

Validation of Standing Data, Automated Transfer Request *and MORE...*
